Greetings Mr. Batka,

I am writing to express my opposition to the proposed injection wells. The coopersville wastewater treatment plant received a grant 2 years ago which allowed it to double its capacity. Additionally, the nearby Muskegon county water plant has excess capacity that has been gone unused for more than 10 years. With these facilities available I see no reason why the leachate from the landfill cannot be treated.

A recent study also found that the local aquifer as been shrinking at a rate of 1 m per year. At the very least a virtual meeting should be held to explain why it's necessary to add this risk to an already struggling system.

Sincerely, *****
